Education

Budapest University of Technology and Economics

Electrical engineer Bsc 2021.09.01 - 2025.01.31

- *Computer-Based Systems specialization (AUT)*

Electrical engineer Msc 2025.02.01 - PRESENT

- *Wireless Communication Systems major (HVT)*
- *FPGA-Based Systems minor (MIT)*

Experience

AITIA International, Inc.

IoT intern 2024.06-2025.02

- Embedded software development for a Raspberry Pi based system in Python

Hardware engineer 2025.02-2025.08

- Schematic and PCB design
- 3D design and 3D printing
- PCB and device assembly, testing

Had to make a new PCB which costed less and was more efficient than the old one. It is based on an ESP32, powered by a battery charged through a solar panel, and housed in a rain-proof 3D printed box.

Relevant projects

Agricultural IoT, an embedded hardware solution (Bsc thesis and TDK 2nd place)

- The result of my internship. The TDK was written together with two other colleagues.

"Persistence of vision" display

- With the help of an STM32 uC, LED-s, shift-registers and a gyroscope arbitrary text or graphs could be displayed. Also made a C# .NET application for it.

Media server

- The "Arr-stack" runs in docker containers. At the moment it is only accessible through local network.

Snake game for EFM32 Giant Gecko starter kit

- Written in C alongside a colleague.

RC car with camera

- A collaboration with two colleagues. Made with an ESP32-CAM, motor-controller, DC-motors and a PS4 controller. The view of the camera was streamed to a website.

Webshop

- Optional university homework. Written in PHP and MYSQL.

Skills

English C1, C, Altium designer, Onshape, 3D printing, basic linux knowledge, Bash, Python, git
